

# TableView and DelegateChooser

new in 5.12

Shawn Rutledge

`shawn.rutledge@qt.io`

eccloud on `#qt-labs`, `#qt-quick` etc.

# About me

- Qt user since ~2004
- The Qt Company - Oslo since 2011
- Pointing devices: touch, Wacom tablets
- Qt Quick Input Handlers
- Linux/X11 and macOS
- QtPDF
- Qt Quick Controls and Dialogs

# Agenda

- Review of Qt Quick Controls 1.x TableView
- Introduction to Qt Quick TableView
- Comparison of model-view relationships
- Demo & walkthrough: refactoring of qps
- Remaining work

# Qt Quick Controls 1.x TableView

## advantages:

looks native on desktop

TableColumn API

## disadvantages:

performance (too many Items and Loaders)

loads all columns when instantiating a row

depends on data roles in the model

## architecture:

QML declarations define the columns

PID	User	Pri	NI	Size	RSS	CPU	Memory	Time	Policy	Command	Current wor
1	root	20	0	220 MiB	6 MiB	0.00	3 MiB	35s	TS	systemd	-

# The New Qt Quick TableView

## advantages:

instantiates only the visible delegates

pools and reuses delegate instances

suitable for models that work with QTableView

## disadvantages:

isn't a drop-in replacement for QQC1 TableView

## architecture:

like a 2-dimensional ListView

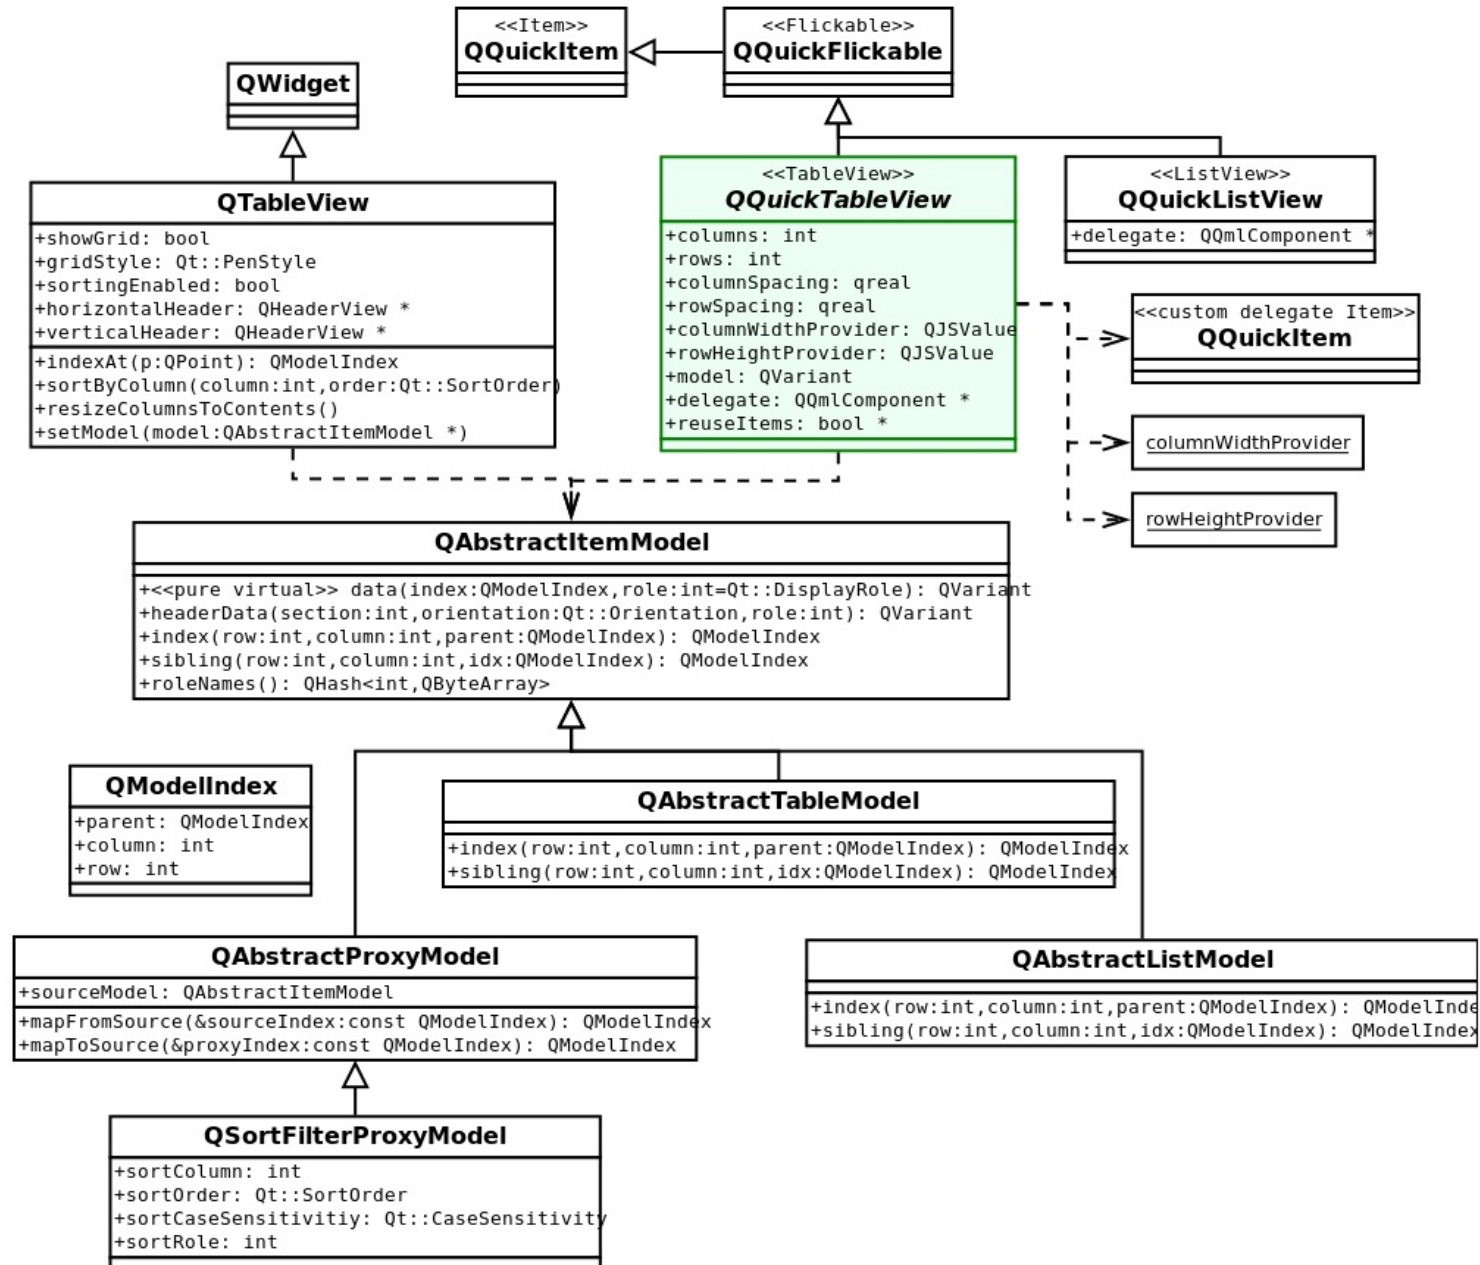

model (or proxy) defines columns, not data roles

styling is entirely up to you (as with ListView)

1	root	20	0	220 MiB	6 MiB	0.0%	0.0%	35s	TS	systemd	-

QModelIndex(column 5, row 9)

# How ListView accesses the model

# How TableView accesses the model

# qps

- Qt 'top' / process explorer application (started ~1997)
- part of LXQt desktop now <https://github.com/lxqt/qps>
- my fork for this presentation: <https://github.com/ec1oud/qps>

## Stuff left to work on

- Header view
- Resizing columns
- Selection
- Decorations and styling
- QML TableModel (QTBUG-70334)
- QML ProxyModel (QTPM-1327)
